

S E L E C T SURFACES®

SELECT SURFACES RIGID CORE VINYL PLANKS – Made in USA

This document provides the installation instructions for **Select Surfaces Rigid core vinyl planks**.

IMPORTANT NOTE: The owner/purchaser must inspect for color, finish, and the quality before installation. The manufacturer cannot be held responsible for costs incurred when a floor with visible defects has been installed.

IMPORTANT WARNING: Your **existing** resilient flooring, backing, lining felt, asphalt cut-back adhesives or other adhesives **MAY** contain asbestos fibers and/or crystalline silica. **DO NOT** grind, chip, sand, drill, saw, bead-blast or pulverize this material in any way; either by hand or by machine. Avoid creating dust when working in contact with these materials. The inhalation of dust from these materials is a known cancer and respiratory tract hazard. Unless you are **absolutely certain** that the resilient flooring you are removing is a non-asbestos material, you must assume that it contains asbestos. Local regulations may require that the material be tested by an approved laboratory or agency for asbestos content and, if confirmed, regulated removal / disposal of the material may be required. For more information, refer to current edition of the Resilient Floor Covering Institute (RFCI) publication: “Recommended Work Practices for Removal of Resilient Floor Coverings” (www.rfci.com)

GENERAL GUIDELINES

All instructions and recommendations are based on the most recent information available. They should be followed for an ideal installation.

- Rigid Core Vinyl Planks should be installed in indoor climate-controlled locations between 65° - 85°F (18° - 29°C). **Rigid Core Vinyl Planks should NEVER be installed in an outdoor/ exterior setting or in any type of garage.**
- Rigid Core Vinyl Planks should be acclimated in the climate-controlled locations for 48 hours before starting installation.
- Rigid Core Vinyl Planks should only be installed after the jobsite has been cleaned and cleared of debris that could potentially damage a finished installation.
- During the installation, mix and install panels from several different cartons to minimize shade variation.
- The finished installation should be protected from exposure to continuous sunlight.
- Rigid Core Vinyl Planks cannot be installed with adhesives. The use of any sort of adhesive during the installation will void the warranty.
- Rigid Core Vinyl Planks cannot be installed in an unheated environment such as a cottage, RV or solarium.

SUBFLOOR INFORMATION

Although Rigid Core Vinyl Planks are designed to be a “floating” floor installation, proper preparation of the subfloor is still a major part of a successful installation. Roughness or unevenness of the subfloor may show through the new floor, resulting in an unsightly surface and cause excessive wear on high spots or indentation on low spots. **All subfloors must be level flat to 3/16 in (4.7mm) per 10 ft (3 meters).** All subfloor and underlayment patching must be done with a non-shrinking, water-resistant Portland cement patching compound.

A. Concrete Subfloors

- Concrete subfloors must be dry, smooth and free from dust, solvent, grease, oil, asphalt sealing compounds and other extraneous materials. The surface must be hard and dense, and free from powder or flaking.
- New concrete slabs must be thoroughly dry (at least 60 days) and completely cured. The final responsibility for determining if the concrete is dry enough for installation of the flooring lies with the floor covering installer.
- Holes, grooves, expansion joints and other depressions must be filled with a latex underlayment, and troweled smooth and feathered even with the surrounding surface.
- Concrete subfloors must have a minimum of 6-mil poly film between the concrete and the flooring.

B. Wood Subfloors

- Wood subfloors must be suspended at least 18 in (45.72 cm) above the ground. Adequate cross-ventilation must be provided, and the ground surface of a crawl space must be covered with a suitable vapor barrier.
- Wood subfloors directly on concrete or installed over sleeper construction are NOT suitable for the installation.
- All wood and wood composition panels, including plywood, OSB, flake board and particle boards, can be used providing they are smooth, flat, structurally sound and free of deflection.
- A ¼ in (6 mm) underlayment panel should be installed over the subfloor if the surface of the wood subfloor is not smooth.
- Wood subfloors must be dry and well secured.
- To avoid squeaking, hammer a nail or screw every 6 in (15.24 cm) along the joints of the wood subfloor.

C. Existing Floor Coverings

- Rigid Core Vinyl Planks can be installed over most existing hard-surface floor coverings provided the existing floor surface is smooth, or can be made smooth.
- Ceramic tiles should be made smooth by applying a cementitious overlay such as patching or leveling compound manufactured specifically to smooth out ceramic grout joints.
- For existing resilient floor, it may be required to apply a skim coat of embossing leveler over a deeply embossed floor. Heavily cushioned vinyl floor or vinyl floor consisting of multiple layers are NOT suitable subfloor for installation.

D. Indoor Radiant Heat

- Use only recommended flooring adhesive over manufacturer’s recommended plywood substrate.
- Turn the heat off for 24 hours before, during and 24 hours after installation when installing over radiant heated subfloors
- Failure to turn the heat off may result in shortened working time of the adhesive.
- Floor temperature must not exceed 85°F (29°C)
- Can be installed over electric, water and every other type of underfloor heating.
- Failure to strictly follow adhesive manufacturer’s guidelines may result in failure and void warranty.

WARNING: Heating mats are not recommended for use with Rigid Core Vinyl flooring. It is best to install the Rigid Core Vinyl floor over embedded floor heating systems.

TOOLS AND SUPPLIES REQUIRED

Crosscut power saw, chalk line/string, pencil, tape measure, tapping block, 8 mm (5/16 in) spacers, rubber mallet, pull bar, painter’s tape, safety glasses, carpenter square, utility knife.

INSTALLATION

PLANK LAYOUT

Do not secure individual Rigid Core Vinyl Planks to the subfloor as they are designed to be a floating floor. All doorjamb should be undercut and cabinets cannot be installed on top of the Rigid Core Vinyl Planks. Wall moldings and transition strips should be installed over any exposed plank edges but should not be fastened through the planks.

1. First, determine how you want the flooring to run. Typically for plank products, the flooring runs the length of the room. There may be exceptions since it is all a matter of preference.
2. To avoid narrow plank widths or short plank lengths near the walls/doors, it is important to do some pre-planning. Using the width of the room, calculate how many full boards will fit into the area and how much space remains that will need to be covered by partial planks. Divide the remaining space by two to calculate the width of the partial planks. Do the same along the length.
3. Note that if the first row of planks does not need to be trimmed in width, it will be necessary to cut off the unsupported tongue so that a clean, solid edge is toward the wall.
4. Use spacers to maintain the 8 mm (5/16”) expansion space around the perimeter of the room and all other objects (e.g. plumbing). This will allow space for the natural expansion and contraction of the planks
5. It is necessary to install a transition strip or T-molding if the flooring is longer or wider than 60 ft (18 m) or between rooms.
6. The planks should be installed from Left to Right. From the top Left corner of the room, put the first plank in place so that both the head and side seam grooves are exposed.
7. Starting from the left with the tongue facing the wall, carefully place the first board in place (**Figure 1**).
8. Place the short end tongue of the second plank into the groove of the first plank. Press down firmly to lock short end, preferably by lightly tapping on the joint with a rubber mallet. Continue in this manner until reaching the final plank in the first row.
9. Cut the final plank piece to length.
10. Begin the second row with the cut piece from the first row (**Figure 2**). If the cut piece is shorter than 8 in (20 cm), do not use it. Instead, begin with a new plank that is at least 8 in (20 cm) in length and allows 8 in (20 cm) between the end joints on the adjacent planks.
11. Position the first plank of the second row by angling it up slightly, pushing forward and interlocking the side tongue (**Figure 3**). Slide the plank to the right to align the edges of the end joint.
12. Carefully push the plank down until the tongue and groove lock together on the side and ends.
13. Press down firmly on end joint, preferably tapping with a rubber mallet to fully engage short end. (**Figure 4**)
14. Install the remaining planks and rows in the same manner (**Figures 3 & 4**).
15. Cut the last plank to size. If necessary, complete the tight fit by tapping the plank into place with a pull bar.
16. Whenever practical, use cut pieces from previous rows as the starter plank to reduce waste.
17. For the best look, maintain 8 in (20 cm) spacing between end joints after the first four rows.
18. The last row may need to be cut lengthwise.
19. Place the last row of planks to be fit on top of the last row of installed planks. Use a piece of plank as a guide to trace the contour of the wall.
20. Mark where the plank will be cut. If the fit of the wall is simple and straight, measure for the correct fit and cut.
21. After planks are cut, position the planks and tighten the fit using the pull bar.

Figure 2

Figure 3

Figure 4

INSTALLING UNDER A DOOR JAMB:

1. Installation under moldings (such as door jamb) may require that the top lip of the groove on the end be reduced in size.
2. Using a small plane or utility knife, carefully shave off the ledge of the groove (**Figure 5**).
3. After the groove ledge has been trimmed, put the board in place and tighten with a pull bar to test for a tight fit. The installer must be sure that the required expansion gap has been maintained and the flooring is not pinched.
4. If the fit is incorrect, re-trim until the fit is correct.
5. Place a bead of wood glue on the bottom lip of the groove.

Figure 5

6. Insert the tongue into the groove and tighten the fit with a pull bar. Hold the plank in place with painter’s tape until the glue is dry. Do not use masking tape or duct tape as they may damage the floors finish.

Recommendation for Wet Area Installation:

When installing in moisture prone areas (eg. kitchens, bathrooms, entryways), seal all expansion spaces with a compressible PE foam backer rod and 100% neutral cure flexible silicone caulk as described in the following procedure.
NOTE: Care should be taken to address any moisture related issues prior to installing SPC.
NOTE: Do not use acrylic based caulks. Do not use acetoxysilicone caulks.

PROCEDURE:

1. Insert a 12 mm (1/2 in) compressible PE foam backer rod into room perimeter expansion space and cover completely with flexible silicone caulk.
2. Insert a 10 mm (3/8 in) compressible PE foam backer rod at transitions and cover completely with flexible silicone caulk.
3. Use 100% flexible neutral cure silicone caulking around door frames and other fixed objects (eg. plumbing).
4. Install baseboards, quarter-rounds or other applicable mouldings and immediately wipe up excess caulk.
5. Ensure baseboards or quarter-rounds are attached to walls, not floors

AFTER INSTALLATION

- Flooring should be one of the last items installed in a project. In order to protect the floors while other projects are being completed, use rosin paper and painter’s tape to hold the rosin paper to the floor (other tapes may damage the finish). Clean the floor thoroughly before laying the rosin paper to ensure that no debris is trapped underneath. DO NOT USE plastic film or other non-breathing coverings as this can cause the floor to become damaged from excess humidity.
- Dust mop or vacuum your floor to remove any dirt or debris.
- It is suggested that you buff the floor with lamb-wool pads in order to remove any loose splinters, residues, foot prints, etc.
- Install any transition pieces that may be needed (reducers, T-moldings, nosing, etc.).

PROTECTION AND MAINTENANCE

Lasting beauty can be achieved through purchasing a quality floor covering and on-going maintenance.

- Furniture should be moved onto the newly installed floor using an appliance hand truck over hardboard runways.
- Avoid extended exposure to direct sunlight. It is recommended to close the blinds or drapes during peak sunlight hours. Floor coverings exposed to excessive heat and light are subject to thermal degradation. Use the appropriate precautions to minimize potential effects on the floor covering.
- Oil or petroleum-based products can result in surface staining. Do not track asphalt-driveway sealer or automobile-oil drips onto the vinyl floor covering.
- Frequently moved furniture should be equipped with felt pads to avoid scratching the floor. Heavy furniture and appliances should be equipped with non-staining large surface floor protectors. Furniture with castors or wheels must be easy swiveling, large surface non-staining and suitable for resilient floors. Do NOT use ball type castors as they can damage the floor.
- Use walk off mats at entrances to prevent dirt and grit from being tracked on to the floor.
- Sweep or vacuum the floor regularly to remove loose dirt. Do NOT use vacuums that use a beater bar or turn beater bar off.
- Do NOT use electric brooms with hard plastic bottoms with no padding.
- Clean up spills immediately.
- Damp mop as needed using clean water and a diluted floor cleaner. Do NOT use harsh cleansers, chemicals, abrasive scrubbing tools, detergents, abrasive cleaners, or “mop and shine” products.
- Vinyl Flooring, like other types of smooth floors, may become slippery when wet. Allow time for floor to dry after washing. Immediately wipe up wet areas from spills, foreign substances or wet feet.

REPAIRS

In the unlikely event that a Rigid Core Vinyl Plank is damaged for whatever reason, the simplest method is to disconnect the planks carefully (protecting the tongue and groove edges) until the damaged plank can be removed. Then replace the damaged plank with a new one and reassemble the disconnected planks. This typically works for planks that are close to the two long perimeters of a room.

For damaged planks that are not close to the perimeter, you may have to remove the damaged planks and insert new pieces without the short and long end grooves.

1. Using a sharp utility knife and a straight edge, cut out the center of the damaged plank by leaving approximately 1 in (2.54 cm) strip attached to the adjacent planks.
2. Carefully cut back from the four corners of the plank to the inside edges in space left by the cut out plank.
3. Remove the plank edges carefully from the adjacent planks making sure the tongues and grooves of the adjacent planks are not damaged.
4. Using a utility knife, remove the tongue strip on both the long and short ends of the replacement plank. In addition, remove the groove strip of the short end of the replacement plank.
5. Place some doubled sided carpet tape along the three sides of the adjacent planks where the tongues and the groove of the replacement plank have been removed. Only the top side release paper of the carpet tape should be removed. The bottom side release paper should NOT be taped on top of the subfloor.
6. Position the replacement plank by engaging the groove of the long side into the tongue of the adjoining plank and pushing down on the other three sides. The carpet tape will hold the replacement plank in place with its adjacent planks. Use a hand roller to further secure the tape.

WARRANTY

Select Surfaces Rigid Core Vinyl Planks are covered by a **limited warranty of 30 years for residential use and a limited warranty of 10 years for light commercial use.**

The stipulations of the limited residential warranty are as follows:

- The flooring will be free of manufacturing defects.
- The flooring surface will not wear through under normal household use.

The following conditions apply to the warranty and may void the warranty if not followed correctly:

- The flooring must be installed according to the instructions provided.
- If filing a warranty claim, it must be submitted within 30 days of the discovery of the damage.
- Any damage to the wear layer must be evident and visible, measuring at least 2 in2, sq (13 cm²).
- Proof of purchase, such as a bill of sale is mandatory when requesting warranty service.
- The warranty is non-transferable.
- The manufacturer reserves the right to designate a representative to inspect the floor in question and remove samples for analysis.
- The warranty includes the replacement material, and excludes labor costs.

WARRANTY EXCLUSIONS

- **Damage due to improper installation, care, cleaning, or maintenance.**
- Use of any adhesive or solvent material during installation.
- **Installation of Rigid Core Vinyl in an outdoor/exterior setting or in any type of garage.**
- Damage caused by severe impact, scratching, cutting, fire, water damage, alterations, or any other wear or damage caused by acts of God.
- The use of Rigid Core Vinyl Planks in an unheated environment such as a cottage, RV or solarium.
- Flooring dulled by soaps, detergents, harsh chemicals, dressings, one-step cleaners or wax.
- Damage caused by high heels, burns, cigarette burns, cuts, scratches, gouges, and indentations including damage from improper floor protectors and furniture rests; staining caused by dyes tracked from carpet, fertilizers, coal, tar, driveway sealers, oil drippings or other similar materials.
- Problems due to moisture and/or alkalinity of the subfloor.
- Flooring installed over unstable subfloors (particleboard, chip wood, or pressboard) or improperly prepared subfloors, and or wet/cold floor are not covered by the limited warranty.
- Discoloration from mold or from flooding, leaking plumbing or appliances, water entering through sliding glass doors or similar conditions.
- Discoloration by exposure to direct sunlight or heat generation.
- Discoloration caused by the use of area rugs or floor mats. Use non-staining mats, for rubber mats will discolor the floor.

For questions regarding installation, please contact our **Technical Support** by email at techsupport@selectsurfaces.ca or by telephone at 1-855-250-8167. For customer service, please contact info@selectsurfaces.ca or warranty@selectsurfaces.ca if you have any questions about our warranty. Visit our website at www.selectsurfaces.ca
